## Ukraine expertise FAQ

### I’ve heard of Ukrainian IT, software and web design?

There are over 166,000 software developers in Ukraine, which alongside Poland is a leading European supplier of global tech expertise. A total of 55% of the positions are middle and senior levels of experience, which come with English fluency.

### How developed is their aerospace engineering?

Ukraine is one of nine countries with a full cycle of aerospace hardware engineering and production. Besides the design and production of passenger and transportation aircraft, Ukraine also boasts a network of aircraft repair enterprises, including companies involved in recovery of military planes and helicopters.

### I know about the natural resources - what is the mining expertise?

With 5% of the world’s mineral reserves Ukraine has developed a sophisticated mining industry. The country exports fuel-coke, fertilisers and sulphuric acid around the world as well as extracting iron, manganese ores, titanium and aluminium.

### Their medical schools are famous - does Ukraine have life sciences too?

Ukraine has attracted international students to its medical schools for decades. Interest in a high-quality yet low-cost medical education has made Ukraine a popular destination in English-speaking African countries like Nigeria and Ghana, where Ukraine is currently the third most popular study destination worldwide. Because of the historically strong engineering and technology facilities in Ukraine, the country is in the vanguard of innovative diagnostic and therapeutic methods. GlobalLink software serves over 20 million patients in 70 countries worldwide, and employ 5000 Ukrainian engineers.

### Automotive industry - what is the scope?

Ukraine’s cluster of 12 automobile manufacturers produce buses, tractors, trucks, passenger cars, trams and rail engines.

### There’s a lot of wheat fields!

Ukraine sits on a third of the world’s rich black soil, which accounts for its #1 global status as a sunflower oil exporter, #2 in barley and #3 in wheat. Recent investment in eco-technologies to increase yields and sustainability have created a cluster of agricultural science centres.
